How do I get fibre to my site?

Sign up and login to the Developer Portal.

We'll check your details to make sure we've got everything we need, and get in touch if not.

Once we've got your contract back, we make sure we've got all we need to complete the registration and get in touch if we're missing anything.

We'll also assign your field based coordinator, the engineer who will be your point of contact and will manage your site.

Register your site, providing contact details, plans and the dates when you're expecting to need our service.

We'll send you an offer letter with our New Sites contract to sign and send back. If your site is 20 plots or more, you won't need to pay.

We'll hand over your details to our planning team, who'll start working on the proposal to bring our network to your site.

At this stage, your registration is now complete.
